Use complexity to make
actionable decisions about

- Metrics
- Methodology
- Program theory
- Data interpretation
- Interaction with stakeholders

Now

RCT

Regression

Causal reasoning

Outcome harvesting

Text content analysis

Formative evaluation

Evaluability assessment

Developmental evaluation

And many, many others

My vision of the future

RCT

Regression

Causal reasoning

Complex behavior

Outcome harvesting

Text content analysis

Formative evaluation

Evaluability assessment

Developmental evaluation

And many, many others

Themes in complexity science

- Predictability
- Feedback loops
- Patterns of change
- Evolutionary behavior
- Where change comes from

Some complex system behaviors that an evaluator can **do** something with

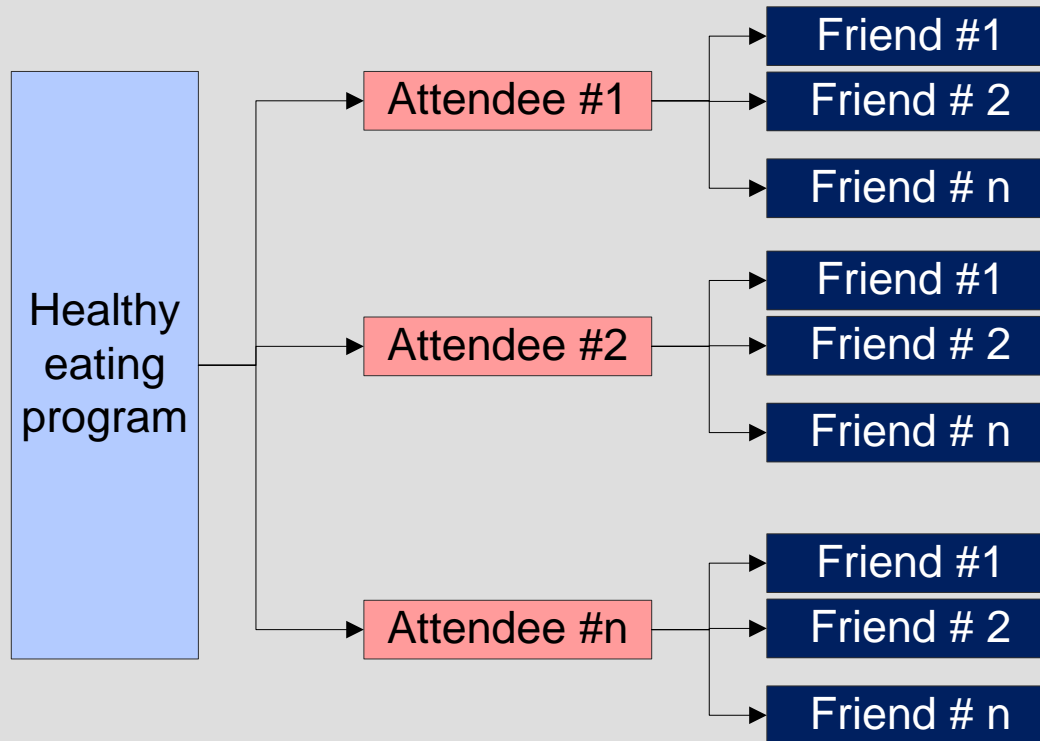

- Scaling
- **Network effects**
- Growth patterns
- Realistic timeframes
- Discontinuous change
- Unpredictable outcomes
- **Unpredictable outcome chains**
- Consequence of small changes
- **Feedback loops among outcomes**
- Inequitable distribution of benefits
- Joint optimization of uncorrelated outcomes

Justice Potter Stewart on defining pornography in *Jacobellis v. Ohio*

"I shall not today attempt further to define the kinds of material I understand to be embraced within that shorthand description; and perhaps I could never succeed in intelligibly doing so. **But I know it when I see it,** and the motion picture involved in this case is not that."

An evaluation model of a healthy eating program that I might very well use

- Additive
- Unambiguous outcomes
- Conducive to an effective methodology
- Reasonable view of program operations

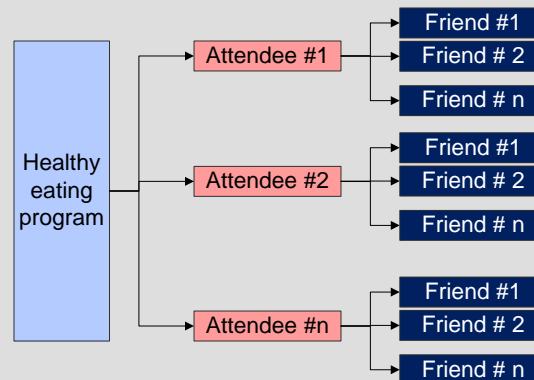

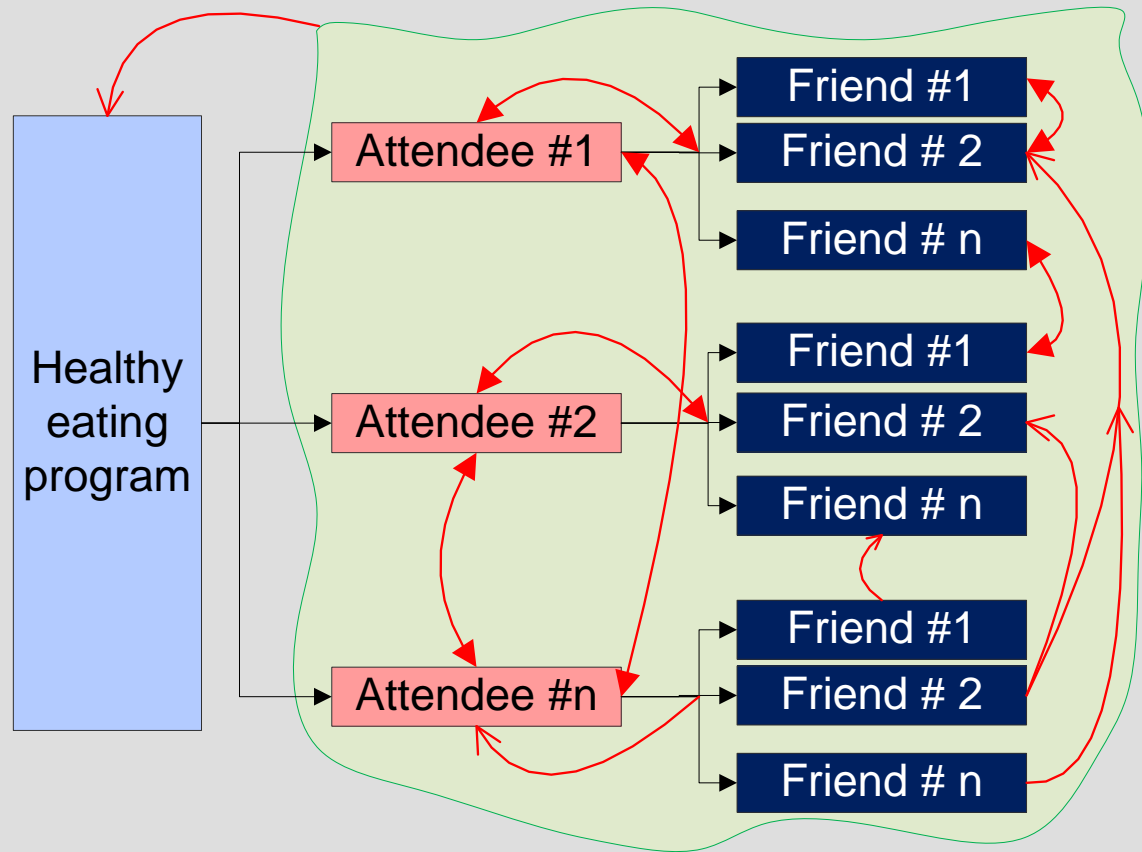

But what if we recast the model to capture complex behavior?

Complexity - informed model

Some behaviors of complex systems that I can **do** something about.

- Feedback loops
- Network behavior
- Unpredictable outcome chains (sensitive dependence)

Feedback

- Track changes in services over time
- Interview staff on perceptions of need

Unpredictable change emanating from community activity

- Monitoring
- Observation
- Open ended interviewing
- Content analysis of community social media

Program theory

- Desired outcomes can be specified.
- Path to desired outcomes cannot be specified.

(Sensitive dependence)

- State change in network
 - Stakeholder expectations
 - Assessment of developing edges
 - Data collection timing for unpredictable consequences

- Additive model may very well be the best approach
- Considering complex behavior provides insight about
 - Program theory
 - Methodology
 - Metrics
